Experience

NSUS Group (GGPoker & WSOP)

Toronto ON, CA

Lead Business Intelligence Analyst

December 2025 – Present

- Own executive reporting for core business units, delivering QBRs and MBRs on time with clear, decision-ready insights for senior leadership
- Develop and validate user-segmented revenue and user activity forecasting models within 5-10% accuracy directly informing organizational strategy and strengthening business planning decisions
- Implement OKR measurement frameworks aligning department objectives with company growth, directly influencing a strategic shift in marketing targets from installs and signups to converted users weighted by acquisition quality and CPA
- Enable enhanced marketing performance analysis through LTV, CAC, and incremental ROI models informing improved budget allocation
- Mentor a team of four analysts driving improvements in SQL and Tableau capabilities and the quality of company-wide BI deliverables

Business Intelligence Analyst

December 2024 – November 2025

- Owned Snowflake BI data warehousing strategy, engineering ETL pipelines to transform complex multi-source data into business-ready structures — doubling report refresh rates and improving data reliability and accuracy
- Led advanced deep-dive analysis projects for major initiatives such as marquee brand campaigns, operational overhauls, and product changes
- Developed multi-dimensional scoring system based on user engagement and performance to evaluate platform sustainability and ecology
- Identified high-impact growth opportunities across operations, game design, and compliance — key outcomes include doubling auto-withdrawal rates (40%→80%), reducing tournament overlays, and delivering tax calculation guidance that generated \$1M+ in monthly savings

Jr. Business Intelligence Analyst

February 2024 – November 2024

- Drove a data-driven culture increasing Tableau dashboard usage by 50% through report simplification and company-wide KPI standardization
- Leveraged Slack to implement workflows, lists, and processes to improve team organization; best practices were later adopted company-wide
- Analyzed operational and user journey issues - major findings include resolving KYC onboarding issues improving conversion rates (1.5x)
- Reduced average ad hoc request turn-around from 1 week to 48h by introducing a complexity and urgency-based prioritization framework

BC Children's Hospital – Digital Health Innovation Lab

Vancouver BC, CA

Data Analyst (Part-time Contract)

September 2022 – February 2024

- Increased surgical site infection prevention adherence rates by 40% by designing and deploying informational easy to use PowerBI dashboards
- Improved dashboard usability ratings by 30% in satisfaction and 50% in frequency by implementing a collaborative design process

Analytics Developer Co-op

May 2022 – August 2022

- Led end-to-end dashboard development collaborating with clinicians to analyze how varying techniques impact difficult intubation outcomes
- Used python to build scripts that clean and merge a +10 data sources to conduct data analysis for pain risk prediction studies (POQI)

CIBC

Toronto, Ontario, CA

Business Systems Analyst Co-op

September 2021 – April 2022

- Reduced average project delivery length from 5 days to 2 days by transitioning to fast-track process segmenting requests based on difficulty and importance rather than the existing FIFO method
- Built and deployed Tableau dashboards supporting weekly analysis for areas of improvement and weaknesses across multiple LOBs
- Recipient of the outstanding co-op student award as nominated by my team for exceptional contributions

Education

The University of British Columbia - Vancouver, BC, Canada

Graduated May 2023

Bachelor of Applied Science in Integrated Engineering

GPA - 3.75 / 4.33

Awards: Graduated with distinction, Deans Honour List (2020 to 2023), 2 x Design and Innovation Award (IGEN330 and IGEN 430)

Project

Foosbot: An Autonomous Robotic Foosball Opponent (Final Year Capstone)

UBC (IGEN430)

- Designed and built a robotic foosball opponent using a camera and detection algorithms to track the ball sending commands to our MCU
- Used python to code key elements of the project such as the robotics decision making, ball tracking, and camera calibration methods
- Applied data driven approach to developing our prediction algorithms for the ball's position and programmed the robot's strategy model

Skills & Capabilities

Technical Skills: Python, Tableau, SQL, Snowflake, PowerBI, Git, Excel, VBA, Automation Tools

Analytics Frameworks: LTV modelling, Churn Prediction, ROI Analysis, KPI Development, Executive Reporting, Data Storytelling

Interpersonal: Analytical problem-solving, Written & Verbal Communication, Project Management, Adaptability, Curiosity
